a. General Workflow	3
b. User wise workflow:	5
1. Source Team:	5
2. Project management Team:	6
3. Functional Teams [R&D, Marketing and Regulatory Team]:	6
4. Management Committee [Mk. head, Sales head, R&D head, GDSO head, Reg, head, CFO]:	7
5. CEO:	7
6. F&D Team member:	7
7. R&D Head:	8
8. PKG Team:	8
9. Regulatory Team:	8
10. SA Team:	9
11. Department heads:	9
12. Industry/Plant trial personnel (Production Team):	9
13. System automated responsibilities:	9
c. Important Client Requirement:	10

a. General Workflow

1. All Users (Source Team, Project management, Functional Teams, Management Committee, CEO) shall log into the system using valid credentials and access a role-based dashboard.
2. The dashboard shall display:
 - List of all projects
 - Current status of each project (PPD, Review, Approval, Execution, Completed, Archived).
 - Pending tasks and approvals for the logged-in user.
3. The source team shall create a new project and initiate the PPD by entering all mandatory project and product details.
4. The PPD shall support:
 - Save as Draft
 - Fixed structured forms
 - Rich text inputs
 - Multiple document uploads
 - Version control for each update
5. The Source Team may create **multiple versions of the PPD**, with full version history maintained.
6. The Source Team shall share the Draft PPD with the **Project Management Team**. The system shall notify the Project Management Head.
7. The **Project Management Team** shall review the Draft PPD and decide which functional teams are required, including:
 - Marketing
 - R&D / F&D
 - Regulatory
 - Packaging
 - ADL
 - PM & SA
8. The PPD shall be circulated to selected teams. Department Heads may further assign it to their team members.
9. The Source Team shall review all comments, update the PPD, and manage multiple PPD versions if required.
10. Once finalized, the Source Team shall submit the **Final PPD for Approval** and select the required **Management Committee members**.
11. The Management Committee (Marketing Head, Sales Head, R&D Head, GDSO Head, Regulatory Head, CFO) shall:
 - Review the PPD
 - Either **Approve** or **Send for Rework**
 - Confirm submission via the mandatory check button
12. If all committee members approve, the PPD shall be forwarded to the **CEO** for final approval.
13. If any member requests rework, the PPD shall return to the Source Team and the review cycle shall repeat.
14. The CEO shall either:
 - Approve (project finalized)

- Send for rework (returned to Source Team)
15. Upon CEO approval, the project status shall change to **Approved – Execution Phase**, and all involved teams shall be notified.
 16. Each team shall perform its respective activities:
 - **Benchmarking** creation and upload
 - Initial feasibility reviews
 - **Packaging**: Tentative costing & Packaging feasibility (parallel activity from start after PPD approval)
 - Supporting documentation uploads
 17. The system shall function as a **Physical Lab Book to E-Lab Notebook**, capturing:
 - Experiment records
 - Observations
 - Supporting documents
 - Historical versions
 18. All reviewers shall:
 - Add comments and remarks
 - Upload documents (PDF, images, Excel, etc.)
 - Submit reviews using a **mandatory “Check & Submit” confirmation**, marking their task as completed.
 19. Upon submission, the system shall notify the **Project Management Team**.
 20. The **F&D Team** shall:
 - Create and upload technical documents (AVD, Innovation, Sustainability, Cost Reduction, Product Improvement)
 - Perform literature search, benchmarking, ingredient search
 - Execute formulation trials
 - Maintain multiple **formula versions** with:
 - i. Rich text
 - ii. Fixed forms
 - iii. Multiple uploads
 - iv. Save as Draft option
 21. The system shall support:
 - **Merge documents** based on the required formula.
 - **Formula comparison** (4–5 formulas side-by-side)
 - Historical tracking of all formulation changes
 22. The finalized **Formulation Development (FD)** shall be submitted to the **R&D Head** for approval.
 23. Upon FD approval, parallel evaluations shall be triggered:
 - **PM & SA Team** – sensory evaluation
 - **Regulatory Team** – regulatory compliance
 - **ADL Team** – analytical and validation activities
 24. All teams shall upload reports, confirm completion using the check button, and submit their inputs.
 25. Final approvals shall be taken from **R&D Head, Marketing Head, and Regulatory Head**.

26. Approved formulations shall be sent for **plant trials**, generating:
 - Stability batch reports
 - TRF
 - COA
 - Sensory reports
 - Stability reports
27. Reports shall be reviewed and approved by the **R&D Head**.
28. The system shall integrate with **SAP**, where:
 - PM Codes
 - BOM Codes
 - SFG Codes
 - Packaging BOM are managed and synchronized.
29. Additional documents shall be generated:
 - MFC
 - License applications
 - Clinical reports
 - Product artwork
 - Specifications
30. Following task done by **F&D Team**
 - Stability checks
 - First commercial run
 - Plain trial execution
31. The system shall provide a **Print & Merge feature**, allowing users to:
 - Select multiple documents
 - Generate a merged printable document (formula + reports + approvals)
32. Video support shall be provided via:
 - Uploads up to 30 MB
 - OneDrive links
 - YouTube links
33. Once all required data is submitted and confirmed by all the teams, PM will fill the report of project completion and the project shall be marked as **Completed**.
34. Completed projects shall move to an **Archive Folder**, with:
 - Full historical data retention
 - Advanced historical search capability
35. If a user leaves the organization, changes role, or goes on leave:
 - The system shall support **handover of projects, tasks, and data**.
 - Admin or Project Management shall reassign ownership and responsibilities.
 - Full audit trail shall be maintained.

b. User wise workflow:

1. Source Team:

- Logs into the system and accesses the dashboard.
- Creates a new PPD by entering all required project and product details.
- Saves the PPD in draft status.

- Shares the draft PPD with the Project Management Team for review.
- Receives automated notifications when reviews/comments are submitted by other teams.
- Reviews all remarks and comments provided by departments heads and team members.
- Updates the draft PPD based on receive feedback.
- Adds/selects the required Management committee members for approvals.
- Submits the final PPD for approval.
- If the PPD is marked for rework by any committee members or the CEO, the source team:
 - Receives notification.
 - Makes necessary changes.
 - Resubmits the PPD, restarting the approval workflow.
- **NOTE: We will convert the PPD form into system entry form based on the PPD format shared by client.**

2. Project management Team:

- Receives notification when a draft PPD is shared by the source team.
- Reviews the draft PPD for scope, feasibility, and planning aspects.
- Decides which additional departments needs to be involved.
- Shared the draft PPD with relevant departments:
 - Marketing team
 - R&D team
 - Regulatory team
- Receives notifications once departmental reviews are submitted.
- After final approval (including CEO approval), receives notification to initiate the final project implementation process.
- Coordinates with all involved teams post-approval.

3. Functional Teams [R&D, Marketing and Regulatory Team]:

- **Departments Heads:**
 - Receives notification when the PPD is shared by Project Management Team.
 - Review the draft PPD from a departmental perspective.
 - Share the PPD with selected team members for detailed review, if required.
- **Team members:**
 - Review the PPD and analyse requirements relevant to their function.
 - Add comments and remarks highlighting changes, risks or clarifications.
 - Submit the review using the Submit review action.
- **Departments Heads (Final review):**
 - Review consolidated feedback from their team.
 - Add final remarks if required.
 - Submit the departmental review.
 - Upon submission, the system notifies the source team and Project management team.

4. Management Committee [Marketing head, Sales head, R&D head, GDSO head, Regulatory head, CFO]:

- Receives notification when the final PPD is submitted for approval.
- Reviews the Final PPD independently.
- Performs one of the following actions:
 - **Approve:** approves the PPD.
 - **Rework:** send the PPD back to the Source team with comments.
- If all committee members approve, the PPD is forwarded to the CEO.
- If any member selects Rework, the PPD is returned to the source team and the workflow loops back.

5. CEO:

- Receives notification once the PPD is approved by all Management Committee members (**Marketing head, Sales head, R&D head, GDSO head, Regulatory head, CFO**).
- Reviews the PPD for final approval.
- Performs one of the following actions:
 - **Approve:** final approve of PPD.
 - **Rework:** sends the PPD back to the source team for changes.
- If approved:
 - The PPD is marked as Finalized.
 - Notifications are sent to the Project Management Team, Source Team and other functional Team involved (**Marketing head, Sales head, R&D head, GDSO head, Regulatory head, CFO**).
 - Projects moves to the final implementation phase.
- If sent for rework:
 - The PPD is returned to the source team and the approval cycle restarts.

6. F&D Team member:

- Receives notification once the PPD is finally approved by the CEO.
- Initiate product formulation activities in the system.
- Create and upload the Technical Development Document, covering:
 - AVD
 - Innovation
 - Sustainability
 - Cost Reduction
 - Product improvement
- **NOTE: We will convert the Lab Notebook into system entry form based on the Lab Notebook format shared by client.**
- Perform and document:
 - Literature search
 - Benchmarking (upload report)
 - Ingredient search
 - Design of Experiments for formulation trials
 - Regulatory confirmation
- **NOTE: For all the above mentioned documents there will be upload functionality, where user will be able to upload the documents.**

- Execute formulation trials
- Record multiple formulation iterations as required.
- Finalize the formulation based on trial results.
- Submit the Formulation Development Form for approval to the R&D Head.
- **NOTE: Formulation Development trials format will be converted to system entry form.**

Remove technical team and PM Team append in F&D

- Receive notification after FD approval by the R&D Head.
- Conduct sensory evaluation of the formulation.
- Prepare and upload sensory evaluation reports.
- Submit sensory insights for approval within the system
- **NOTE: F&D Team will upload the Sensory evaluation document.**
- Receive approved **Plant trial** outputs.
- Performs stability checks, commercial runs and plain trial execution.
- Upload stability check reports, commercial run report and plain trial report.
- Once all the reports are uploaded by the team, the project will be marked as completed.
- **NOTE: All the above mentioned reports will be uploaded.**

7. R&D Head:

- Receives notification when the FD form is submitted by the F&D team.
- Reviews formulation details, trial outcomes and supporting documents.
- Take one of the following actions:
 - Approve the FD
 - Send for Rework with remarks
- If sent for rework, the FD is returned to the F&D Team for modification.
- Upon approval, triggers downstream evaluations:
 - Sensory evaluation
 - Costing
 - Regulatory validation
 - Claim substantiation
- **NOTE: For all the above mentioned documents there will be upload functionality, where user will be able to upload the documents.**
- Receives **Plant trial** reports and approve them.
- Approves final documentation before tech transfer

8. PKG Team:

- Receives notification post FD approval.
- Perform tentative costing and packaging feasibility analysis.
- Prepare and upload costing and packaging-related documents.
- Submit costing insights through the system
- **NOTE: PKG Team will upload Tentative costing document.**

9. Regulatory Team:

- Receive notification after FD approval.
- Conduct detailed regulatory compliance checks.
- Validate ingredients, formulations and claims.

- Upload regulatory assessment documents.
- Submit regulatory approval or remarks in the systems.
- **NOTE: Regulatory team will upload Regulatory check documents.**

10. SA Team:

- Receives notifications after FD approval.
- Perform claim substantiation analysis.
- Upload supporting documents and evidence.
- Submit claim substantiation feedback for review.
- **NOTE: SA Team will upload claim substantiation document.**

11. Department heads:

- Receives notifications once all evaluation inputs are submitted.
- Review consolidate evaluation reports.
- Take one of the following actions:
 - Approve
 - Send for rework
- If any department head requests rework, the formulation is returned to the F&D Team.
- Upon approval by all heads, the formulation is cleared for Plant trial

12. Industry/Plant trial personnel (Production Team):

- Receive finalized formulation documents.
- Conduct plant trials based on approved formulation.
- Generate and submit the following reports:
 - Stability batch report
 - TRF
 - COA
 - Sensory report
 - Stability report
- Once all the reports are uploaded, notification is sent to R&D head for approval process.
- Once all the documents are approved by R&D head, production team and Packaging team simultaneously will fill out the following forms:
 - BOM Code – Production team
 - MFC – Production team
 - Product details / Artwork – Production team
 - Specification – Production team
 - SFG Code – Packaging team
 - PKG BOM – Packaging team
- Also, uploads the following documents:
 - License application – Regulatory
 - Clinical report
- **NOTE: All the above mentioned reports will be generated based on the format shared by client.**

13. System automated responsibilities:

- Sends notifications at each workflow stage.

- Creates and maintain Documents, documents versioning, Approval history and Audit trails.
- Ensure role based access control.
- Locks approved documents from further editing.

c. Important Client Requirement:

1. The system **will be developed as a non-responsive web application** and shall be optimized for desktop usage only.
2. System access **will be restricted to official office devices only** and shall be enforced using machine ID-based access control, allowing access from any Wi-Fi network.
3. The application **will support approximately 50–60 employee logins**.
4. **Single Sign-On (SSO)** will not be required.
5. User sessions **will automatically expire after 5 minutes of inactivity**, and the system shall log out users without any user action.
6. **Duplicate or concurrent logins will not be allowed**, and any new login shall automatically log out the previously active session.
7. Media upload functionality **will be available throughout the system**, allowing users to upload:
 - Images and documents
 - Videos up to **30 MB**
 - External video links via **OneDrive and YouTube**
8. A complete **Audit Trail and Change Log will be maintained**, and the system shall track all changes, approvals, and user activities.
9. The system **will support end-to-end processes for PPD, Benchmarking, F&D, Packaging, ADL, and PM & SA** within a single integrated platform.
10. A **role-based Dashboard will be provided** and shall display the real-time status of each project and its current stage.
11. The existing **physical lab book process will be digitized into an E-Lab Notebook**, and all formulation, experimentation, and observations shall be recorded electronically.
12. Formula creation and other forms **will support a “Save as Draft” option**, and users shall be able to create and manage multiple formula versions.
13. Formula records **will support fixed structured forms, rich-text inputs, and multiple file uploads**.
14. The system **will allow comparison of 4–5 formulas or forms simultaneously** to support evaluation and decision-making.
15. A **Print and Merge feature will be available for formulation records**, allowing users to select multiple documents and generate a single merged printable output.
16. **SAP integration will be implemented**, where PM codes, BOM codes, and other master codes shall be managed and synchronized from SAP.
17. **Karomi will be integrated for artwork management**, and artwork-related data shall be maintained within the system.
18. **Third-party integrations will be required**, including **email services for system-generated notification alerts**, and the client shall confirm the preferred email service provider, configuration details, and access credentials for integration. (Please let us know or We will let you know if any other third-party integration is required)
19. The system **will maintain complete historical data**, and older projects and records shall be moved to an Archive folder.

20. Every user **will be required to confirm task completion using a mandatory check button before submission**, and the system shall treat this action as task completion.
21. The Project Manager **will add required data and submit final reports**, and once all mandatory submissions are completed, the project shall be marked as completed.
22. In the event of an employee exit, role change, or extended leave, the system **will support structured handover of projects, data, and task allocations to another user**, with full traceability.
23. **AI: AI-based formulation trial analysis** will be implemented, and the system shall analyse historical and current formulation trial data to identify patterns, compare trial outcomes, recommend optimized formulations, and support data-driven decision-making during formulation development.
24. **AI: AI Assistance from documents search** (Advanced historical search functionality) will be provided to retrieve archived and active project data.
25. Based on the defined project workflow and system requirements, we request you to please coordinate with your IT team and share the proposed **server infrastructure and environment configuration details**. The details should include, but not be limited to:
 - Deployment environment (On-premise / Cloud / Hybrid)
 - Server specifications (CPU cores, RAM, storage capacity)
 - Storage configuration considering document, image, and video uploads
 - Expected number of total users and concurrent active users
 - File upload size limits and estimated monthly data growth
 - Network bandwidth and access controls
 - Security standards and compliance requirements
 - Backup, archival, and disaster recovery strategy
 - Scalability requirements for future growth
 - Infrastructure considerations for **AI-based formulation trial analysis**
